How To 1
Upload Pictures to Photography4Christians

This document is designed to help you upload pictures to the Photography4Christians web site, if anyone has any easier methods please let us know.

The easiest method is to post images in the Photo Gallery section, all you need to do, after logging in, is go to the gallery page.

Click on [+Add Photos] button.

You will then be presented with the upload window, as below. If you have created an album click on the button that says [Existing Album] if you wish to create a [New Album] then select the appropriate button, here   If you create a new album, give it a name, in the box.

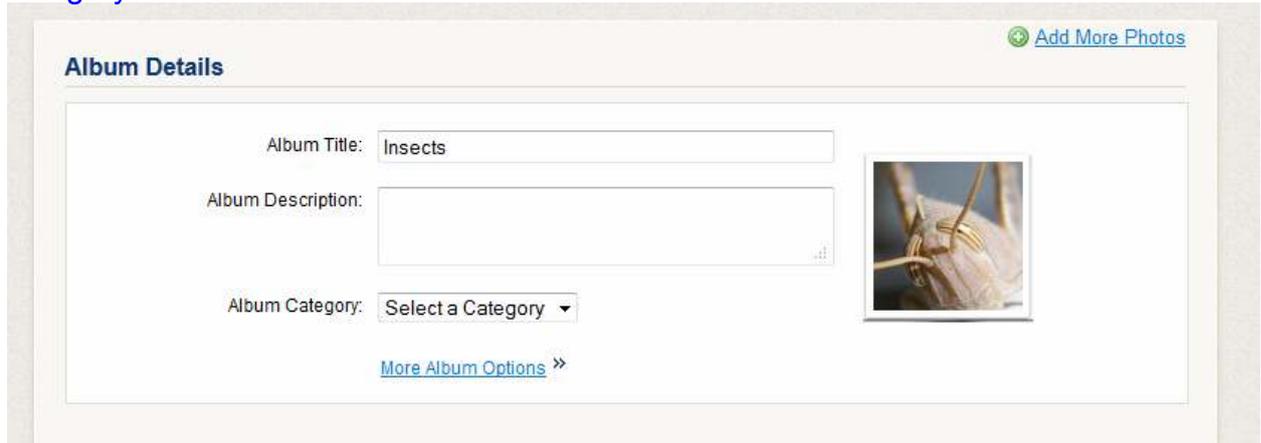

Then just click on the [Upload Photos] button, then brouse your photo files fr the image you want to upload, you can upload multiple images at the same time by holding the [ctrl] key down while you select the photos.
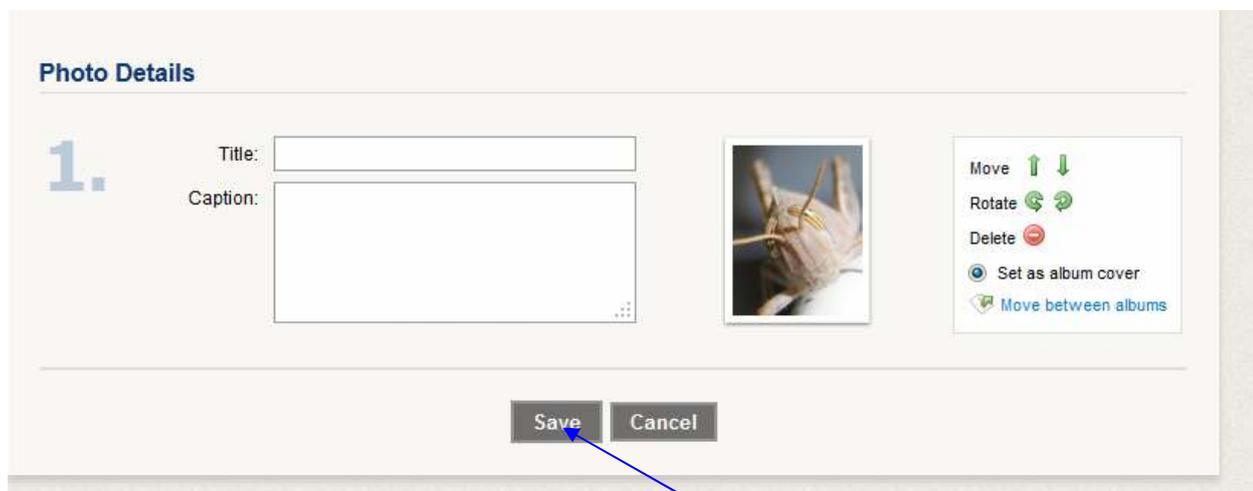

When your pictures have up loaded you will see the screen below, Click on the [Submit] button.

You will then be asked to enter some details about your album, a title, and an album description, also a category. as below.

On the same screen you will be asked to enter details about your photograph as below.

Once you have entered the details of the photo (you can use the Caption box to leave post about the photo if you wish) you just click on the [Save] button, and it's done. Simples!

Incerting pictures into the Forum posts

Inserting photos into forum posts is not quite as simple, but once we get used to it I am sure it will become second nature to us.

As I have said, in order to save on storage space, we will need to resize the pictures, I would recommend a size of about 1200 pixels along the longest side of the photo. You have two options here, you can either use your own software, that probably came with your camera and save it to a different folder so that you keep the original in its full size format. The other option is to use the online service that you will need to obtain your URL for the picture. Photobucket is one of these services that I use, where a full range of editing options are available. For the purpose of these instructions I will use Photobucket.
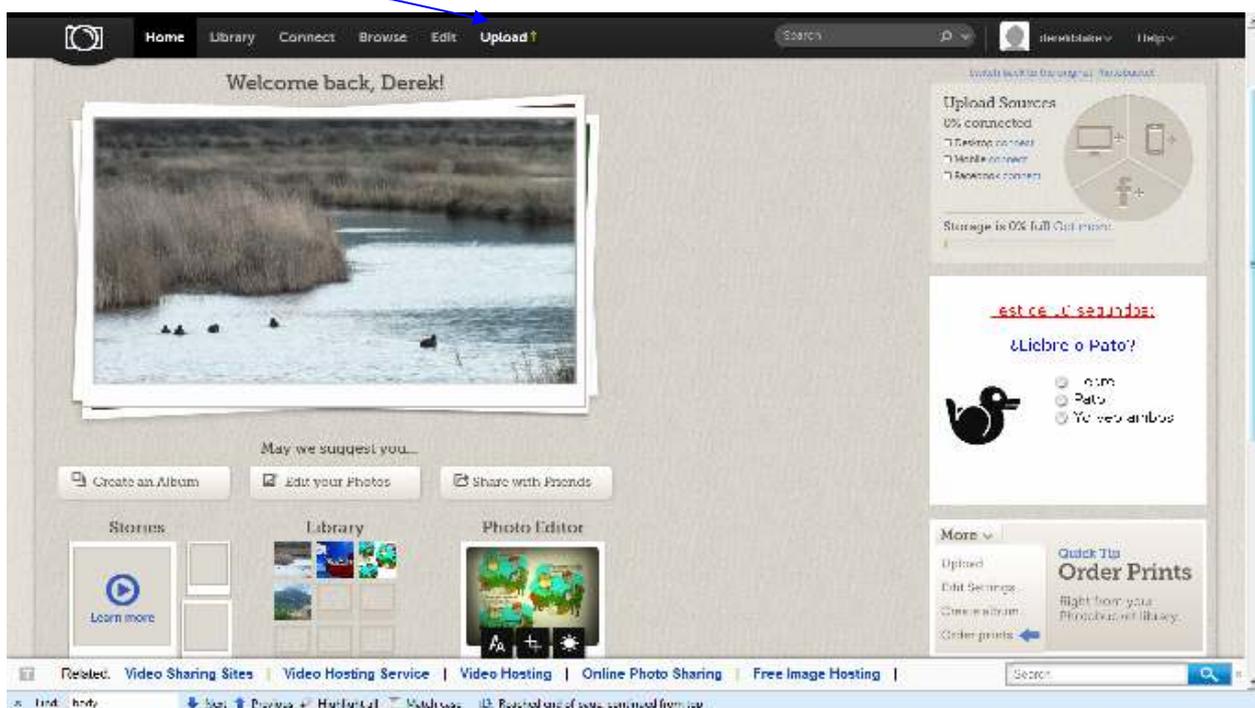

The first thing you need to do is to upload the picture or pictures to:
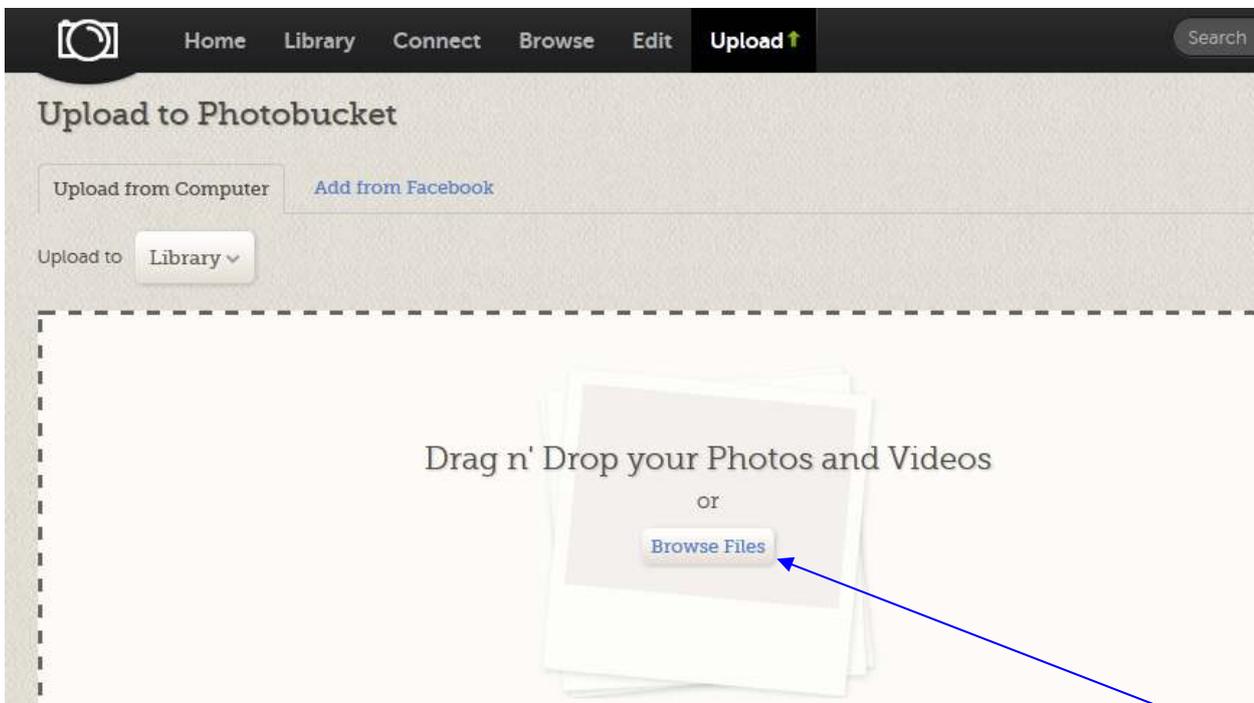

http://s759.beta.photobucket.com/

If you do not already have a Photobucket account, you will need to register, very easy to do.

Once you have an account you will see the below screen, which is your private gallery. You can set your gallery to private so then no one will be able to access your images. Click on the [Upload Tab] here

The next screen you will see is this one:

Upload to Photobucket

| Upload from Computer | Add from Facebook |

Upload to Library ⌄

Drag n' Drop your Photos and Videos

or

Browse Files

You can either 'Drag & Drop' your pictures into this frame, or you can click on the [Browse Files] button and select in the usual way.

Upload to Photobucket

| Upload from Computer | Add from Facebook |

View Library   Continue to Home   ↑ Upload More

Import from Facebook
Import your Facebook albums and photos in one click.

Import Photos

Video interaction will not interrupt your upload.

Related Free Image Hosting | Unlimited Photo Storage | User-generated Video | Online Photo Sharing | Video Hosting |

× Find: body   ↓ Next ↑ Previous ↕ Highlight all ☐ Match case   ↕ Reached end of page, continued from top

You will now see the above screen with your uploaded pictures arrayed along the bottom of the screen.

Now click on the [View Liberary] button.

On the following screen you will select the picture for the forum post.

Select the picture from your Library, like this one.

Once you have selected the picture, you will see an enlargement
on the screen. Once this is done you need to get the URL for your photo, click here [Direct Link]
and the URL is automatically copied to your clipboard.

The code window will briefly say, 'Copied'.

Now go directly to the Forum posting box

Post a Quick Reply:

+ Post Reply ☑ Include my signature (Edit)

In the Forum click on the Picture icon here.

The URL box will appear in the screen,
hold down the [ctrl] key and press [v],
the URL will be pasted into the box.

Click the [OK] button and the picture should
appear in your post on your
Photography4Christians Forum post.

Try it, if you make mistakes learn by them and
try again. if you have problems, let me know.

Happy posting!

Enter the URL of the image
